## Android 1 app store

What: Apple's App Store suffered a noticeable outage at noon on Friday. How: Some couldn't load the App Store. Others could not be downloaded. Why you care: The App Store is your main avenue for new apps, app updates, and in-app purchases. If it's offline, it's not available to you. We're pretty sure it's all back now. It's not just you. One of the advantages of having such deep well articles about technology here at Lifewire is the ability to see what's going on in the world, based on our articles is going to get unusually high traffic. DownDetector.com today we noticed an article about not downloading iPhones, which is rising to the top of our current traffic. A quick Downto detector.com (a website dedicated to finding out what websites are struggling) showed us that the App Store went a few hours ago. It's still struggling even now, although Lifewire employees seem to be able to download and update apps. Apple's own status page says the App Store has a problem that affects some users. Apple Usually, such interruptions are taken care of quickly enough by Apple; options in the App Store will be back soon. Until then, you'll see if it's off for you when you're trying to download or update apps on your iOS device. Microsoft Launcher Google Now Apex We have selected three major Android launcher alternatives you can check out. Microsoft Launcher is a clean and cluttered solution, focusing on the stylish look and handy button that you press one to edit your wallpapers using Bing carefully selected daily images. Comes with a clean side panel where you can get a ton of useful widgets: recent and popular contacts, settings for reminders, weather alerts and so on. Arrow also has a swipe from the bottom of the gesture that brings a menu like control center to iPhone, which is certainly useful (but this particular element of launcher tends to stutter on some phones). Google Now Launcher is probably the best way to get stock and a modern Android watch google itself sees it. With the latest update, Google Now Launcher allows you to normalize icon sizes, so that there are no longer huge icons contrasting with many trier ones, and it even allows you to use your phone in landscape mode (which we find awesome). Apex Launcher has long been the number one Nova Launcher alternative, providing the same level of depth and customization. Pixel Belle Delta Polycron Take this from iPhone users – you can change your icons on Android! If you're already using a custom launcher, you can download one of the many icon packages available in the Play Store (most of which are free or cost a dollar). We love the Pixel Icon Pack, which brings cool visuals to your Android Nougat device, and we have provided three of our recent favorites for you to check out, but feel free to explore the Play Store and find the one that suits your style best. Wallpapers Google Muzel Wonderwall Unfortunately, phones these days do not come with almost enough customization options out of the box, and often the choice of wallpapers built into the phone is very limited. Luckily, there are some killer wallpaper apps on Android that can really bring your screen to life and feel... Personal. Wallpapers from Google are one of the best options featuring a selection of trendy wallpapers (including a catchy Satellite view of our beautiful planet Earth) that the app rotates every day. Then we have Muzel, developed by Google engineer Roman Nurik. Muzel has recently been updated by adding an integration notification to the drop-down list icons for Android 7 Nougat, and it is more stable now. The app allows you to set a small blur in your wallpapers so that the image does not interfere with your apps. So you get a gradient-like look that sets the mood but doesn't interfere. Last but not least, we have Wallp, an app that has accumulated all stock wallpapers on various popular (and not so popular) phones. Needless to say, these are all very high-quality wallpapers that are worth checking. Zooper Zooper Widget offers one of the best options for fully customizable widgets: you can match widgets to any wallpaper and style because it's easy to choose from different backgrounds, fonts and styles of clock, calendar, time, weather and a bunch of other information that is widget-capable. Another great gadget app out there is KWGT, and both solutions come with tons of add-ons and extensions that will make your device unique and functional through some creative widgets. Google Photos Google Photos brings a small revolution in image storage and sharing: it comes with unlimited cloud storage images up to 16-megapixels (and you can choose to downsize and very slightly compress larger images) and videos up to 1080p. It also makes sharing images and albums very easy and works equally well on all platforms: iOS, Android, the web and literally anything else in your browser. Finally, it has also become a brilliant new option that allows you to drag your finger and use it like a computer mouse. Quite magically, it allows you to search (and actually find) images by simply typing in a few words like animals that filter out all images of animals in your photo collection. Magic Google Photos is probably the most great app to keep your photos in the cloud, but when it comes to the simplicity of your organization, QuickPic is still a way to go on Android. Its overwhelmingly positive ratings show that simple work: it is a lightweight application with modern design and it connects to online storage servers. Snapseed was acquired by Google a few years ago for good reason: it contains an interface that allows you to edit images on your phone very easily using an intuitive wipe-based interface. You have a powerful way of selective correction, so you can touch a specific point and change only a certain part of the image, not the whole. Snapseed is ad-free, running smoothly and is probably the best way to edit photos on Android.VSCO Cam is an app by the Visual Supply Company, a company known for developing some of the best film-imitation filters in Adobe Lightroom, and it's not surprising that this expertise has led to a collection of some amazing filters that you get from vsco cam. Beauty VSCO filters (or presets rather) are a subtle measure of artistic effects that can help you get a sense of the right amount of touch-ups needed for a photo, and also helps you avoid over editing your images. CamScanner is a great app if you want to make sure that all the important documents you have scanned and living safely in the cloud (and safely, we think away from thieves, maybe not so much the NSA). CamScanner allows you to scan them and edit them so that they look like high quality PDF, not some cheap pictures taken from your mobile phone. 500px Flickr EyeEm If you're looking for a place to share your photos, see other pictures and participate in a photo forum that would improve your photography, 500px and Flickr are two of our favorite places to visit. Both are new and modern applications with a great visual style and both work very smoothly on Android. The third option we enjoy using is EyeEm, an app that offers a more dynamic community where you can see the featured photographers and find inspiration. GoPro moving software into the territory started with the Quik video editing app and it is a great solution that will automatically create involving video compilations that can then be easily shared. Magisto is another established video maker that adds music and effects to your videos and enlivens them up. VLC is known to be a video player that can easily chew through all sorts of formats with ease on your desktop, and it is similarly excellent for mobile. After years of enduring testing, the app is out of beta and works solidly. Our previous favorite app, iX Player has been around for years and remains a great video player that we keep using. Its swipe-based interface is customized for touch devices: swipe left and right to go back and forward; swipe up or down (right of the device) to adjust the volume, and swipe up or down to adjust the brightness. Spotify needs a little introduction. The \$10 music subscription service allows you to listen to more than 20 million songs unlimited and ad-free, a model that needs to be replaced by the current buy-an-album one. You also have Spotify for free, which doesn't require a paid subscription, but introduces ads and restrictions. Sometimes you need to do something as simple as trimming the part of a song. We have found that Lexis Audio Editor does a good job as a wave editor that allows you to trim accurately and easily export your creations. If you have djay, chances are that you don't rely on your phone, but in case you're on the road or something goes wrong, Android is djay2. The application works perfectly with modern (and not so good for slightly older devices), and when it works it allows you to have many options: from slowing down and accelerating songs to some inventive mixing techniques. If you are into making music and want to create some beats to go, Nanoloop is one of our favorite tools for Android. Nanoloop combines sequencer, synthesizer and sampler in one pack, and it is a very minimal but beautifully made tool to create electronic music. Then, if there is a music pro looking for an app that will help you edit more complex projects, you can always rely on caustic 3 and FL Studio Mobile. These complex applications work better on a well-fed tablet, where extra screen space is a welcome addition. A signal is a messaging app that allows you to have private conversations through both text messages and voice calls. It's free, supports group calls and texts, and allows you to share media. Best of all, it's open source, so you can be sure that all encryption is done properly and the government's ever-longer hands won't reach your private life. The server also never accesses any of your communications and never stores data. The creator of Russian social VK.com Pavel Durov has now officially removed running his product, but he is focused on creating Telegram, a secure messaging app. The app uses encryption and although it's not as hard as a signal, it's a popular solution that seems safer than most other couriers out there. AccuBattery is a detailed battery application that provides a screen-on battery life rating for your device and is very useful for nailing down what the app uses, how many battery resources. It's simple, well designed and there's both a free and paid option (we recommend getting the last one). Greenify is a simple battery management application that ensures that no application abuses the system by taking too much of its resources. It warns you about this and allows you to keep an eye on your battery life. BitDefender Norton Avast Let's make one thing clear: if you go to some third-party applications or open shady files you know nothing, there's no need to worry about antivirus apps for Android. The smart sandbox mechanism on which the platform is built makes Android very secure. However, if you have some doubts about your device, these three are the best antivirus apps around. BitDefender has a hefty price but does a great job, while Norton has a freemium app that can be explored, and Avast has a nice third option to use. Google Drive is a deeply integrated Android platform and it is a great service. We rarely use cables to transfer files these days: just send them to this pure cloud app with 15GB of free storage, which would be enough for many people. You can also buy a \$2/month plan that gives you 100 GB of space, or shell out \$10 a month for 1 TB of cloud storage. Then there's Dropbox, which also offers an easy to use app with a 1 TB storage option that costs \$100 a year, is as good a choice and it's up to you to decide which you like better (we stick to Google Drive because of how it integrates with other Google services). Asus File Manager File Explorer Astro Google's new Files Go file manager app may still be in beta, but it works perfectly, features a clean interface and comes with superpowers such as the ability to quickly send large files between two devices. It also helps you easily free up device memory. Other options worth considering include: The Asus File Manager app allows you to access your files in an organized way and is free and richly available. Our two other go-to options are NextApp's File Explorer or Astro File Manager, which offer slightly different design but very similar functionality. We have recently learned that AirDroid, our go-to app for wireless transfer of files to our laptops and phones, was not as secure as it should have been. Some updates have happened in the meantime, but it was enough to push it into second place, behind a rather excellent AirMore that offers almost identical functionality without all the fluff that Air HasDroid has added recently. LastPass keeps your password and personal information safe. Lock your passwords in a secure repository, automatically fill in your web browser and application logging, and create new secure passwords. With LastPass, you only remember one password - your LastPass master password. Store logins, create online shopping profiles, create strong passwords, track personal information about photo and audio notes, and more. 1Password, on the other hand, creates strong passwords for each site and remembers them. If you have trouble remembering all the different passwords that you use, 1Password will do it for you. The new version of the app is fully functional and works on both phones and tablets. And if there's one thing we keep learning over the years, it's that security is the number one concern that mobile users have. With this app, you can use ridiculously complex passwords (created by 1Password) and you can let the app remember them. A virtual private network (VPN) is an excellent tool for electrical users in all types of cases: from security to accessing content, which for some reason may be blocked in a specific area. Opera Free VPN is our favorite Android VPN app with its simplicity and invincible price tag for the free base version. You also have a Turbo VPN as an alternative, another well-established application that does the job well. If you are used to using torrent files for any reason, Fluid is probably the best BitTorrent client out there: clean, easy, without downloading or upload restrictions, after carefully material design directives. It allows you to choose which specific files torrent to download, gives you file and folder priorities, and has magnet link support. We offer you two options to turn your phone into a smart remote control: either: goals to check something on your laptop/desktop computer, or whether the phone has an infrared beamer to check your TV or air conditioner. Sometimes laziness can feel good. 7 Minutes workout Finally, given that we always have our phones in our pockets, it's worth using them for something that actually benefits our health: our workouts. We have a hard time recommending an inflated gym app for phones because we believe that the gadget is not the place in the gym where you workout, but a light workout and a reminder to go on a run or make these famous 7-minute workouts energy for you while in the office, Runkeeper and 7-minute workout are two great apps. ESPN's TheScore Bleacher Report ESPN has rolled out a completely redesigned app for Android that offers a beautifully simplified user-friendly style and allows you to easily keep up with the latest news around your favorite sports team. Not only that, you can get a by-the-minute live score of news games, as well as a news section that comes with plenty of videos. The focus of the new ESPN app are the following leagues: MLB, NFL, College Football, NBA, College Basketball, MLS, Cricket and more. If you want more scores, news and analysis, theScore stands out at first, while Bleacher Report does very well in the last two. Moves is a motion tracking application with a simple interface, but most importantly, it doesn't require you to constantly do so. Just run it once, and it will follow your steps, drives, cycling, and crashes in the background. Plus, it will also map your daily activities on the map. The fact that the app is acquired by Facebook recognizes the fact that you get a sleek and smooth experience. We all have these periods when you get sick, and suddenly find yourself taking a handful of medications to get better earlier. Medsafe's Meds and Pills Reminder will help you track if these drugs are due in a simple and simple fashion. Clue Period Tracker is the best app to track your period and while you probably don't care if you're a guy, your girlfriend will certainly appreciate showing you this useful app to her. Hopper Hopper is a cool airfare service that sends you alerts when the time is right to buy a ticket, based on algorithms that predict when prices are likely to rise, down or stay sideways in the near future. It's not all new to Hopper for Android, though, because it's one of the most convenient to use designs we've seen in such apps, without unnecessary features and distractions, and great, easy to touch icons, entry fields and calendars. Hopper feeds you airfare alerts only when the prices of our place choose have hit the lowest spot, and are about to rise, so check it out when you travel, it can save you quite a few bucks on airfares. We like to skyscanner your eagle eye to watch a variety of flight and ticket vendors, and it's also accompanied by the promise to give you the best price your flight. Fashionistas, join in! Well, at least look at these two apps, which gives you a ton of cool new ideas dressing up and styling it up. Houzz Houzz is a great hub for ideas for home design and renovation with an array of images to help you visualize what you want to build or change before making many mistakes in your first. With a great writeup in the form of a weekly newsletter, Houzz has become our go-to place these days, when only changing something at home will help us thoughts of chaos in our minds. Feedy Yahoo News Digest Google News' new Yahoo under Marissa Mayer is an interesting mix of technology and media company, and the Yahoo News Digest application is a brilliant example of where Yahoo is going. The app is a sleek and thoughtful curation of human editors as it presents with morning and evening digests of the most important news from all over the world. We love the idea of having about 10 news pieces for each ding: you can quickly scroll between leading topics, and get a sense of graduation that news junkies, who otherwise tend to spend a lot more time digging up news, appreciate. If you are someone who reads news as a work or serious hobby, there is no better way to keep up with everything that is happening than a full-blown news reader. After a pathetic end to Google Reader, Feedy has emerged as the number one alternative to regular updates, a slick interface, and even a premium tier offers even more functionality. GasBuddy Here is a useful app that is downright important for travelers who want to top up the cheapest price on any site: GasBuddy. This clean little app is especially useful in the United States, where you can use it to find a gas station that offers the best deal for them all. Why do you need it? If you never leave your hometown and you already know there's all the gas stations, you probably won't, but everything else seems pretty obvious. Duolingo brought a small revolution to the acquisition of language on a mobile device. Its simple, repetitive approach works well to introduce you to the language in all its four incarnations: reading, writing, speaking and listening. Duolingo currently allows you to learn Spanish, French, German, Portuguese, Italian, Dutch, Irish, Danish, Swedish and English. We look forward to a similarly easy way to learn Asian language! Khan Academy has collected a huge number of lessons in both text and video to help you catch all sorts of subjects: from basic math to more complex mathematics, all explained within the system, allowing you to continue only after you have learned the content needed. It's a great way to learn, especially in the sciences, but it also applies to art. Khan Academy offers articles on mathematics (arithmetic, pre-algebra, algebra, geometry, trigonometry, statistics, calculus, linear algebra), science (biology, chemistry, physics), and even humanities teachings about art history, civics, finances and more. Tinder Bumblebee OkCupid Everyone is on Tinder these days, and that's what makes this simple hot or not app be a good choice for those looking for a date, and maybe something more. We're not big fans of the superficial approach to people that looks like the core of Tinder, but at the end of the day it's up to you to shape your relationship with people. IMDb is the world's largest movie database and as such it is an indispensable tool for movie buffs. Movie trailers, cast, reviews and all kinds of flick paraphernalia decorate IMDb with a free movie app, more than enough to give it a place on this list. Delicious has arrived and taken over the cooking app world like a storm: unexpected and unexpected. It's a great little app for your cool videos and it's our best choice for most people out there. Yummly is our second favorite application for cooking, and while there are many others that are equally large, we highlight Yummly because of its awesome filters that allow you to discover dishes from different styles and kitchens easily. SimpleFeast is a more sophisticated app at the paid level for those who want recipes from proven chefs and proven excellence. Then we also have a pure simple Recipe Book, which is also a great choice. Yelp is another service that has grown thanks to excellent reviews from its users. Whether it's reviews for a gym club or restaurant, the options on Yelp will help you make the right choice not only in the United States, but in most English-speaking territories. Territory.
